Re: Update on the RoHS Roadmap and the status of DVEO products in Production

Abstract: The Restriction of certain Hazardous Substances (RoHS) directive (2002/95/EC) limits the allowable quantities of lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyl (PBB) and polybrominated diphenyl (PBDE) contained in a homogenous material. In order to comply with the RoHS directive, manufacturers of electronic equipment need to ensure that any product placed on the market after July 1, 2006 complies with the restrictions on the six hazardous substances listed above. This memo provides an update on the RoHS compliance status of the products currently in Production at Linear Systems Ltd.

References: 1. RoHS directive 2002/95/EC
2. Linear Systems RoHS Roadmap (<http://www.linsys.ca/rohs-roadmap.cfm>)

Summary: With the exception of the products mentioned in this document, all other products currently in Production are compliant with RoHS directive (2002/95/EC) and are manufactured with due diligence to ensure that sub-components and materials used are RoHS compliant.

Status Update:

The following products are not RoHS Compliant:

- DVB Master Quad/i Leaded (Model 105)

All other products manufactured by Linear Systems Ltd are RoHS compliant and do not contain any of the restricted substances in quantities greater than allowed by the EU directive. This statement is made based, in part, from information provided by third parties and Linear Systems Ltd makes no representation or warranty as to the accuracy of this information.

Products will be labeled to indicate their compliance to the RoHS directive. To order RoHS Compliant products, please specify “RoHS Compliant”, for example “DVB Master Dual-In FD-R RoHS Compliant”.
